AWS VPC PEERING ASSIGNMENT REPORT

Network configuration and implementation record

Submitted by	Samiksha Lankeshwar Padghan
Cloud platform	Amazon Web Services (AWS)
Region	Asia Pacific (Sydney) — ap-southeast-2
Assignment	VPC configuration and VPC Peering

1. Objective

The objective of this assignment is to configure two Virtual Private Clouds (VPCs) with non-overlapping IPv4 CIDR ranges, create subnets and route tables, and establish private communication between the VPCs using VPC Peering. The peering connection and end-to-end connectivity must be verified in the AWS console and, where applicable, using network tests.

2. AWS environment

Parameter	Value
Cloud provider	Amazon Web Services (AWS)
Region	ap-southeast-2 (Sydney)

3. VPC and subnet configuration

Component	VPC A	VPC B
VPC name	ewb-vpc-a-correct	ewb-vpc-b
VPC ID	vpc-0b80411f2635c6848	Not recorded in notes
IPv4 CIDR	10.10.0.0/16	10.20.0.0/16
Subnet	ewb-a-public	ewb-b-private
Subnet CIDR	10.10.1.0/24	10.20.1.0/24
Availability Zone	ap-southeast-2a	ap-southeast-2b
Additional subnet	Private: 10.10.2.0/24	Not confirmed

The two VPC CIDR blocks are non-overlapping, which is a prerequisite for VPC Peering.

4. Gateway and route-table configuration

Resource	Recorded configuration
VPC A Internet Gateway	ewb-igw-a — igw-0d533e2ad85b151b0; attached to VPC A
VPC A public route table	ewb-a-public-rt; default route 0.0.0.0/0 to VPC A Internet Gateway; public subnet association was reported completed
VPC A private route table	ewb-a-private-route — rtb-0ef7e168f13582e83; private subnet association reported completed; local route checked
VPC B private route table	ewb-b-private-rt; private subnet association reported completed

5. VPC Peering and routing

A VPC Peering connection named **ewb-a-to-b-peering** was identified as the planned connection between VPC A (requester) and VPC B (accepter). The available configuration notes do not confirm that the connection was created, accepted, or reached the Active state. Therefore, this report does not claim that peering is complete.

After the peering connection becomes Active, add a route to each VPC's relevant route table: in VPC A, route destination **10.20.0.0/16** with target set to the peering connection; in VPC B, route destination **10.10.0.0/16** with target set to the same peering connection. Add these routes to the route tables associated with the subnets that need to communicate.

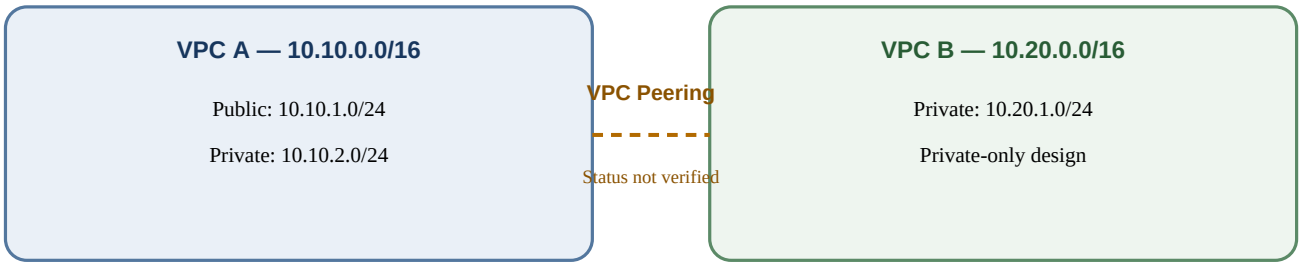

Figure 1. Proposed logical topology based on the configuration details recorded. The dashed peering link is shown as pending verification, not as a confirmed active connection.

6. Verification checklist

Verification item	Evidence/status
VPC A and VPC B exist with non-overlapping CIDRs	Configured / details recorded
Subnet and route-table associations	Reported configured; verify in console
VPC peering connection created and accepted	Not confirmed
Peering connection state is Active	Not confirmed
Routes to the opposite VPC CIDR via peering	Not confirmed
Security groups and network ACLs permit required traffic	Not confirmed
EC2-to-EC2 connectivity test	No test output provided

7. Screenshots to attach as evidence

• VPC A details page showing its name, VPC ID, and CIDR.

• VPC B details page showing its name, VPC ID, and CIDR.

• Subnets list/details showing subnet names, CIDRs, and VPC associations.

• Route-table Routes and Subnet associations tabs for the relevant route tables.

• VPC Peering connection details showing requester, accepter, and actual status (once created).

• Both route tables showing routes to the opposite VPC CIDR via the peering connection (once configured).

• Security-group inbound/outbound rules and genuine connectivity-test output (once tested).

8. Conclusion

The initial VPC network foundation has been configured based on the details available: two VPCs with separate CIDR ranges, subnets, and route-table resources. The VPC Peering connection, reciprocal peering routes, security permissions, and end-to-end connectivity remain to be verified with AWS console evidence and test results. The assignment should be marked fully complete only after those checks pass.
